DOOSAN CONSTRUCTION MACHINERY

DAEWOO'S HISTORY began in 1937 in South Korea Chosun Machine Works, with the establishment of the company. Daewoo Heavy was initially part of a large group, which included, inter alia, shipbuilding and electronics industries. Excavator Production started in 1977.

Euro Daewoo founded in Frameries, Belgium in 1990. That time the factory started to produce DH-model series of mid-sized excavators.

In 2005, Doosan bought the majority share of Daewoo stocks. Doosan is a family business, which is one of the South Korea's largest companies. When the ownership changed, the name changed to Doosan-Daewoo. In 2007 it was shortened to only Doosan.

In 2009 the offices moved to Waterloo and the place became a center of European operations. Doosan is strong in the Korean market with more than 40% of the market for construction machinery.

The company's goal is to become one of the world's three largest civil engineering machine manufacturer among the next few years.

SPARE PARTS

Our skilled personnel will serve in all parts issues. New premises with our service has improved even further. Four of our own stock of spare parts around Finland guarantee fast delivery. It's also possible to get parts directly delivered from the factory.

Original replacement is a safe choice. It ensures the functioning of the machine and to improve the resale value.

We want to serve our customers better than average. Activities for spare parts have been, and will be the main target of our investments in the future.

SERVICE

All of the maintenance service and any repairs are carried out by skilled mechanics. Done in the work shop or in the field, and using original spare parts which are guaranteed by the fit and functionality.

Documented maintenance and servicing agreements may be peace of mind for the customer.

SPARE PARTS AND SERVICE

Then they know that the machine will have a high productivity and good resale values.

Our maintenance services is to make customers life easier while improving their business results. We think about the whole business, and offer flexible solutions to help and improve utilization and achieve their business goals.

Our trained professional, are willing to give valuable advice on the maintenance, servicing intervals, the parts and the right questions in the conclusion at the right time. These professional advice - with the right maintenance work and parts - may be the crucial difference, which prevents the unexpected, costly and time consuming mechanical faults. Just what you need in order to ensure peace of mind.

» *The comprehensive after-sales service network of yours and your whole life arc of time—since before the delivery carried out in a professional customer-oriented outfitting.*

Osmo Lappalainen and Timo Toivonen both have made a long career in the construction machinery sector. And they saw the opportunity to start importing Daewoo construction machines. So they established Dae-Tek Oy in Vantaa, Finland in August 1990. In the same year Maxpo exhibition in Finland was held. That was the place where Finnish contractors could see for the first time Daewoo excavators, Daewoo DH 130 and DH-200LC.

Coincided with the start of business at a time when Finland got into so far the worst recession. Machine trade dwindled to almost nothing a few years. When the recession began to ease in 1994, began commercial success, which now has lasted for over two decades.

The company has been steady growth in line now for over ten years. After beginning the company had three people, so now employees is already more than 30 people. So far, the best results were achieved in 2008 when the company's turnover exceeded 35 M €

During the operation of the whole enterprise it has mainly been focused on Daewoo construction machinery. Other representations are Terex backhoe loaders, Hanwoo Work Equipment (renamed Everdigm).

In 2007 the name Daewoo was changed to Doosan, the Korean family-owned company bought Daewoo Heavy's majority. Doosan has done in recent years a number of corporate purchases, the largest Bobcat, Moxy and Montabert. This enlargement of the Doosan range in recent years that have come Dae-Tek Oy's product range, Doosan Moxy dumpers and Montabert hydraulic breakers and demolition equipment.

In the last ten years, Dae-Tek Oy's share of the overall market has been steady around 10% of the class. Track-mounted excavator in the market has been as it's best 20% of the class.

So Dae-Tek Oy has reached a steady and significant role in the Finnish machine trade market.

TWO DECADES OF MACHINE TRADE

New machines were sold in the peak years of about 200 pc, and the average in recent years about 150 new machines per year.

The year 2009 was in the company's history, a significant year of change. The new premises were completed in Kerava, Huhtimo industrial area. Two-hectare plot rose to 4 100 m2 premises on which the machine shop there is 1 800 m2 and spare parts and storage 800 m2.

The new premises will allow the expansion of activities in the coming years and also enhance the company's operation, when all functions are in one building. The new premises are intended to serve our customers better and more efficiently. When our operations are enhancing, customers will certainly benefit.

20 YEARS is a significant achievement and we believe that during that time experience and expertise, provide the basis for future challenges. Machine trade is in front of the reform activities in the machine trade sector in both Finland and abroad has undergone major changes. The company must be able to innovate and evolve.

We have set a goal to be one of those who wish to become involved in the situation and succeed.
